

MUHAMMAD HASHAM

Gameplay Engineer

Lahore, Pakistan | +92 349 6024302 | Email | GitHub | LinkedIn

PROFILE

Gameplay Engineer experienced in building multiplayer, combat, ability, AI, and player-facing systems in Unity and Unreal Engine. Built core gameplay for a 27-player battle royale using Photon Fusion and currently contribute to an Unreal Engine action game featuring boss encounters powered by the Ascent Combat Framework (ACF). Comfortable owning gameplay features, debugging complex systems, collaborating across disciplines, and delivering within small distributed teams.

CORE SKILLS

Gameplay: Combat systems, boss encounters, Gameplay Ability System (GAS), AI behavior, game-state logic, dynamic objectives, optimization, UI, and rapid prototyping

Multiplayer: Photon Fusion, RPCs, network synchronization, authority models, replicated gameplay, and multiplayer debugging

Engines & Frameworks: Unity, Unreal Engine, Ascent Combat Framework (ACF), Roblox Studio, Godot, and Phaser

Backend & Tools: PlayFab, Firebase, C#, JavaScript, Scriptable Objects, Git, and GitHub

Collaboration: Feature ownership, cross-functional teamwork, technical problem-solving, written communication, and remote collaboration

EXPERIENCE

Devsinc

November 2025 - Present

Game Developer - Gameplay and Multiplayer

Lahore, Punjab

- Develop gameplay, combat, multiplayer, and AI systems across Unreal Engine and Unity projects, including NanoCry, Sacred Tails, and Speed Keyboard Escape.
- Contribute to an Unreal Engine action game featuring boss battles, implementing and refining combat mechanics using the Ascent Combat Framework (ACF).
- Built multiplayer systems for NanoCry, a 27-player third-person battle royale, using Photon Fusion for RPC-driven gameplay and network-state synchronization.
- Implemented NanoCry's battle system, abilities, threat indicators, NPC behavior, and dynamic zone-generation and capture mechanics across the NanoLords, Rustborn, and Voidkeepers factions.
- Supported Sacred Tails by implementing battle-system logic and core combat calculations.
- Shipped Speed Keyboard Escape with multiple levels, NPCs, leaderboards, advertisements, and in-game purchases.

Ten Pixel Studios

September 2023 - November 2025

Game Developer - Gameplay Systems

Lahore, Punjab

- Built and optimized 2D and 3D gameplay systems in Unity, improving performance and frame stability across multiple devices.
- Designed modular Scriptable Object systems for game balancing, data management, and scalable content production.
- Integrated Firebase for real-time player-data tracking, authentication, and cloud-save synchronization.

itch.io Game Jams

2025 - 2026

Gameplay Programmer - Unity and Phaser

Lahore, Punjab

- Shipped a complete game during GMTK Game Jam 2026, collaborating with a team to implement gameplay mechanics, enemy logic, and UI in Unity within a fixed timeframe.
- Shipped a complete 2D browser-based game during the itch.io Summer Game Jam 2025, using Phaser and JavaScript to build player movement, enemy logic, and UI.

Mindstorm Studios Winter Jam

February 2023 - March 2023

Gameplay Programmer

Lahore, Punjab

- Built a five-level 3D game in Unity with a team, designing and implementing its core gameplay mechanics.

FAST NUCES

2018 - 2023

BS Computer Science - CGPA: 3.25

Lahore, Punjab

EXTRACURRICULAR

Programming Tutor

July 2023 - Present

Freelance

- Conduct online tutoring sessions in programming and software development, helping students strengthen their coding practices and problem-solving skills.

Esports Player

2020 - Present

Rainbow Six Siege and Tekken 8

Lahore, Punjab

- Competed in Rainbow Six Siege from 2020 to 2021 and currently compete in Tekken 8.
